

## Ravel Data Services

---

# Better Search and Analysis

Ravel Data Services (RDS) is a division of Ravel Law that facilitates use, research, and computational analysis of Ravel's comprehensive, authoritative collection of U.S. caselaw.

### Comprehensive Collection

Ravel's comprehensive collection of U.S. caselaw is created in collaboration with Harvard Law School.

The U.S. copyright compliant case law collection includes all published federal and state cases.

### Advanced Software

RDS provides advanced software tools in a cloud infrastructure for users to customize datasets.

RDS helps researchers and developers meet the technical challenges of handling massive amounts of digital text.

### Sophisticated Algorithms

With RDS, users can leverage sophisticated algorithms that identify parties, judges, citations, and more.

RDS uses this infrastructure to process information for researchers, saving them time and money.

# Advantages of Ravel Data Service

## U.S. Copyright Compliant

The ONLY comprehensive, authoritative, and U.S. copyright compliant collection of caselaw available to researchers and developers.

## Advanced Technology

Get started fast with advanced technology. With RDS you can leverage sophisticated algorithms that identify parties, judges, citations, and more.

## Cloud-based

Benefit from cloud computing. Ravel has the most advanced cloud-based infrastructure and technology for extracting, classifying, and identifying legal data. RDS leverages this infrastructure to process information for researchers, saving them time and money.

## Customized Datasets

RDS supports the creation of custom datasets, enabling researchers to focus on their analysis rather than sifting through unwanted information.

To learn more about how Ravel Data Services can enable and accelerate research on the most comprehensive collection of caselaw available, please contact us.
